The EZ 2-8-2 portable concrete mixer and concrete batch plant mixes 2.5 cubic yards (67.5 cu ft) of concrete .

This mobile concrete mixer can be towed into very remote job sites where a concrete mixer truck cannot go and mix on site. Total length is 29 feet with tongue removed.

The Standard Auto Control

controls sand, rock, water, cement (7SL silo) by weight. The auto control calibrates in English or Metric units. Our rotating drum design provides a superior finished product compared to volumetric mixer designs. The Flow - through drum design rapidly mixes low slump concrete. This design enters dry material on one side of the drum and

discharges wet concrete on the opposite side.

The mixer, mix's horizontally and the mix is rapid and consistent. The Flow - through drum design is superior to standard close drum designs. The cycle times are 3 to 5 minutes.

The EZ 2-8-2 will free you

from the time, distance and schedule limitations of third-party concrete plants.

With the EZ 2-8-2 you will be able to load and mix your own specific concrete recipe how, when, and where you want it.
